

# ABOUT US

In 1980, Dwight Leatherwood founded Leatherwood Plastics to serve high technology industries by manufacturing and installing superior wet processing equipment. Leatherwood Plastics is a division of Leatherwood, Inc., a privately held Texas corporation.

Committed to providing quality Clean Room equipment, Leatherwood Plastics provides standard and custom-designed products manufactured from chemical-resistant plastics, stainless steel, or other appropriate materials.

We do it all here in our 20,000 sq. ft. main facility, from fabrication to final packaging. With state-of-the-art computer controlled fabrication equipment, plastic sheet stock bending, butt-welding and complete metal welding services are all performed in house. A wide variety of testing and demonstration protocols are also available.

Production capabilities are enhanced by a Class 10,000 / 1,000 / 100 Clean Room Assembly and Test Area for final assembly, final test QA, and packaging of semiconductor production and cleaning equipment. Once we have tested and retested, clean packaging and crating is performed right in our shop.

Our highly skilled craftsmen take pride in their work, contributing significantly to the ultimate quality and reliability of our products.
